Proposed design for new disposal field for
John H. Nebelsick residence, 9303 Pioneers

phone: Wk: 488-0202

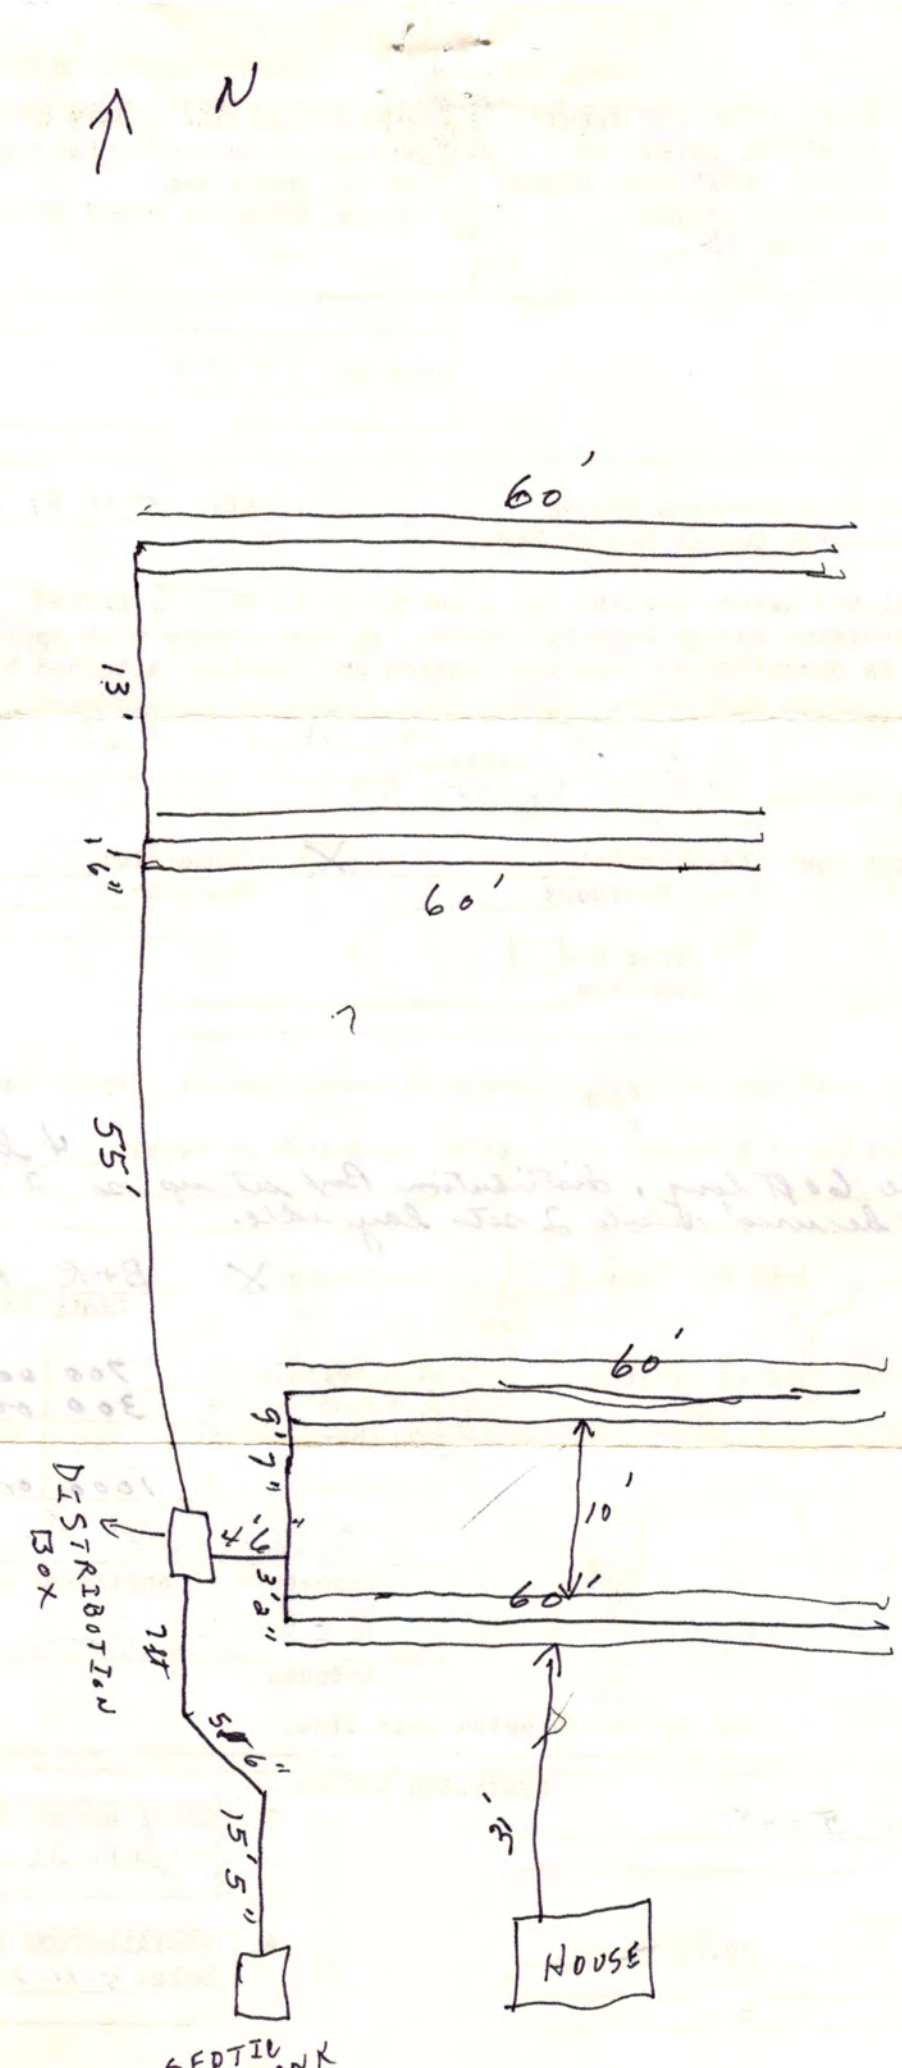

Proposal for the installation of new disposal field for waste water at the John H. Nebelsick residence, 9303 Pioneers Blvd., Linc. Ne.

This proposal consists of the construction of two sets of parallel laterals; one set 25 feet down grade from the septic tank and a second set approximately 80 feet down grade from the septic tank. These laterals are to be constructed according to the specifications in the U of N Neb Guide pertaining to laterals. 18" to 36" deep, 3' wide.

The reason for the two sets of laterals is to permit an annual diversion of effluent from one set to the other thereby permitting the unused set to regenerate it disposal capacity. The diversion will be accomplished by a valve installed in the outflow line immediately above the first set of laterals.

This proposal was developed by Mr. Phil Harlan Waste management specialist for the U. of N. It was his considered opinion that this system would most nearly fit the needs of the Nebelsick household given the percolation rate of the soil in the disposal field area.
